# ABOUT

This year, the OpenInfra Indonesia Community, in collaboration with local communities from SV UGM (FORKOM TRI), will host one-day event in Yogyakarta.

OpenInfra Days is a platform for networking, knowledge sharing, and exploring the latest developments in infrastructure technologies. It brings together cloud providers, businesses, government agencies, academia, and tech companies from across the region to discuss IT infrastructure built with open source tools such as Linux, OpenStack, Ceph, and Kubernetes. The annual conference features keynotes and sessions that evolve each year, and the 2025 edition marks its fifth year.
